Canvas: <http://uk.instructure.com>

WeBWork: Students will submit homework through WeBWork. You can access WeBWork through the WeBWork module on Canvas. Students who registered late may not have an account; please see Professor Harris for help.

Grading: We will follow the grading procedures in the common syllabus.
Student grades will be recorded on Canvas.

Students will need to create an account at iClicker Cloud (formerly Reef Poling) for this class. You will then need to add the account “MA-114 Spring 2018 - Harris 8 AM.” This task can be accomplished through canvas using the iClicker module. We will take attendance in lecture by administering regular quizzes through iClicker Cloud. You will need a smartphone, tablet, or laptop to do this. Please contact me if you are not able to bring a device to class. Please do not use your device in lecture when we are not conducting polling or quizzes.

Policies: Students are allowed five excused absences from lecture without documentation. Students who miss a sixth lecture and want to receive credit must submit documents showing that also six absences are excused—so save your documentation! This documentation must be submitted within one week of a sixth absence.

Students who miss recitation and would like to request an excused absence should speak with the recitation leader within one week of the absence. Students with excused absences from lecture, exams, or homework should contact Professor Perry. Students who are travelling will be expected to complete and submit WebWork by the due date in the syllabus unless granted an exception by the course instructor.

All requests for re-grades of exams or quizzes should be submitted on the same day as the exam is returned in recitation (for exams this will be the Thursday of the exam week). To request a re-grade on an exam, please write your question about grading on the paper and return the paper to your TA or to Professor Harris.

Please make use of instructor office hours, the Mathskeller, and The Study. We are here to help.

Two suggestions: 1. For a study group to work on the homework. The best way to learn mathematics is to solve problems with your fellow students. Make sure that you can explain the reasoning behind your solution to a fellow student. 2. Read the text before coming to lecture and review lecture material before coming to recitation. Most people (your instructor included!) do not completely understand new mathematics on a first reading, but benefit from several passes through the material. If you have seen the main ideas, you will be better prepared to develop a better understanding in lecture and recitation.
